

### **Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the application:

### **Listing of Claims:**

WHAT IS CLAIMED IS:

1. (Previously Presented) A dielectric device having a dielectric film formed directly or indirectly on at least a part of a glass substrate or a plastic substrate, said dielectric film comprising silicon oxide in a part at least in the direction of the film thickness, the composition ratio of silicon and oxygen being between 1:1.91 and 1:1.98 both inclusive.
2. (Previously Presented) A dielectric device having a dielectric film formed directly or indirectly on at least a part of a glass substrate or a plastic substrate, said dielectric film comprising silicon nitride in a part at least in the direction of the film thickness, the composition ratio of silicon and nitrogen being 3:3.84.
3. (Currently Amended) A dielectric device having a dielectric film formed directly or indirectly on at least a part of a glass substrate or a plastic substrate, said dielectric film comprising silicon oxynitride having silicon oxide in which the composition ratio of silicon and oxygen is between 1:1.91 and 1:1.98 both inclusive in a part at least in the direction of the film thickness, or said dielectric film comprising silicon oxynitride having, ~~and~~ silicon nitride in which the composition ratio of silicon and nitrogen is 3:3.84, ~~in a part at least in the direction of the film thickness.~~
4. (Previously Presented) A dielectric device according to any one of claims 1 through 3, wherein a silicon layer or a silicon compound layer is formed directly or indirectly on at least a part of said glass substrate or said plastic substrate, and wherein said dielectric film is formed on at least a part of said silicon layer or said silicon compound layer.
5. (Previously Presented) A dielectric device according to any one of claims 1 through 3, wherein said plastic substrate is made of polyimide resin,

polyetherketone resin, polyethersulfone resin, polyetherimide resin, polyethylenenaphthalate resin or polyester resin.

13. (Previously Presented) A semiconductor device having a dielectric film formed on at least a part of a silicon layer formed directly or indirectly on at least a part of a glass substrate or a plastic substrate, said dielectric film comprising silicon oxide in which the composition ratio of silicon and oxygen is between 1:1.91 and 1:1.98 both inclusive in a part at least in the direction of the film thickness.

14. (Previously Presented) A semiconductor device having a dielectric film formed on at least a part of a silicon layer formed directly or indirectly on at least a part of a glass substrate or a plastic substrate, said dielectric film comprising silicon nitride in which the composition ratio of silicon and nitrogen is 3:3.84 in a part at least in the direction of the film thickness.

15. (Currently Amended) A semiconductor device having a dielectric film formed on at least a part of a silicon layer formed directly or indirectly on at least a part of a glass substrate or a plastic substrate, said dielectric film comprising silicon oxynitride having silicon oxide in which the composition ratio of silicon and oxygen is between 1:1.91 and 1:1.98 both inclusive in a part at least in the direction of the film thickness, or said dielectric film comprising silicon oxynitride having ~~and~~ silicon nitride in which the

composition ratio of silicon and nitrogen is 3:3.84 in a part at least in the direction of the film thickness.

16. (Previously Presented) A semiconductor device according to any one of claims 13 through 15, wherein said dielectric film constitutes a part of a gate dielectric layer relative to the direction of the thickness of the gate dielectric layer.

17. (Original) A semiconductor device according to any one of claims 13 through 15, wherein said plastic substrate is made of polyimide resin, polyetheretherketone resin, polyethersulfone resin, polyetherimide resin, polyethylenenaphthalate resin or polyester resin.
